

Anderson Greenwood Instrumentation Hand Valves

$\frac{3}{16}$ " (4.8 mm) orifice hard-seated hand valves for pressures to 6000 and 10000 psig (414 and 689 barg)

General Application

H7 series valves are designed for safe, repetitive bubble-tight closure, simple maintenance and a long, trouble-free life. The H71 is designed to meet increasing pressures in oil and gas production, providing bubble-tight shutoff in severe operating conditions.

TECHNICAL DATA

Materials

CS, 316 SS, Monel®, Hastelloy®

Seats:

Metal

Connections

$\frac{1}{4}$ ", $\frac{1}{2}$ ", $\frac{3}{4}$ " NPT

Pressure (max):

H7:

6000 psig (414 barg)

H71:

10000 psig (689 barg)

Temperature (max):

H7:

1000°F (538°C)

H71:

500°F (260°C)

Temperature (min):

316 bonnet assemble:

-313°F (-192°C)

Features

- Ball end stem eliminates seat galling, provides bubble-tight shutoff and long life. Hardened, non-rotating ball ensures perfectly aligned closure.
- Packing below threads prevents lubricant washout, thread corrosion, process contamination and eliminates galling.
- Easily adjustable PTFE packing decreases replacement downtime and increases valve life.
- Dust cover protects stem from lubricant contamination.
- Safety back seating prevents stem blowout or accidental removal and provides a metal-to-metal secondary stem seal while in the fully open position.
- ENC plated 316 SS stem prevents galling or freezing of stem threads. CS valves use a 303 SS stem for 'hard-to-soft' contact to prevent galling.
- Rolled stem and bonnet threads provide additional strength.
- Mirror stem finish in the packing area provides smooth operation and extends packing life.
- Metal-to-metal body-to-bonnet seal in constant compression prevents bonnet thread corrosion, eliminates possible tensile breakage and gives a reliable seal point.
- Metal seat can be resurfaced for longer valve life.
- Panel mount option available

NOTES

1. Approximate valve weight: 1.5 lb [0.7 kg].
2. Valve Cv 0.52 maximum.
3. H7 only.
4. SG (Sour Gas) meets the requirements of NACE MR0175/ISO 15156 (for chloride conditions ≤ 50 mg/l [ppm]) and NACE MR0103.
5. CS is zinc TCP plated to prevent corrosion.
6. SG3 (Sour Gas) meets the requirements of NACE MR0175/ISO 15156 (for chloride conditions > 50 mg/l [ppm]).
7. Elgiloy[®] is a registered trademark of Elgiloy Specialty Metals.
8. Welded ends on CS bodies are A105 material.

316 SS	6000 psig at 200°F (414 barg at 93°C) 1500 psig at 1000°F (103 barg at 538°C)
Hastelloy®	6000 psig at 200°F (414 barg at 93°C) 1500 psig at 850°F (103 barg at 454°C)

NOTE

316 SS valve with minimum temperature -313°F (-192°C)@ 2500psi (172 bar).

Anderson Greenwood Instrumentation Hand Valves

Pressure vs. Temperature - H71

Pressure and Temperature Ratings - H71

Valve	PTFE packed bonnet
CS, 316 SS	10,000 psig at 200°F (414 barg at 93°C)
SG SG3	4000 psig at 500°F (276 barg at 260°C)

NOTE

316 SS valve with minimum temperature -313°F (-192°C)@ 2500psi (172 bar).

Bonnet Assemblies

The H7 and H71 feature a metal-seated bonnet assembly which has a rotating stem with free swivel ball-type seat for long service life. The stem threads are rolled and lubricated to prevent galling and reduce operating torque. The stem seal is a patented PTFE packing which is adjustable in service. A protective dust cap is fitted to contain stem lubricant and prevent the influx of contaminants. The specially hardened ball seat is ideal for both gas and liquid service. All bonnets are assembled with a bonnet locking pin to prevent accidental removal while in service.

The high pressure H71 bonnet assembly uses a strengthened stem and bonnet and is fitted with a larger size T-bar handle.

The H7 high-temperature bonnet assembly utilizes a similarly designed stem and bonnet, incorporating adjustable graphite rings and back-up pressure rings to ensure a leak-free stem seal.

H7/H71 SERIES

Anderson Greenwood Instrumentation Hand Valves

AGCO Tube^[1]

Integral Tube Fitting Design (H7 only)

- Proven design performance
- No tube twist on makeup
- Low torque assembly
- Male nut
 - Silver-plated to prevent galling
 - Threads are rolled for additional strength
 - Gives superior tubing support for vibration resistance
- Bubble-tight seal on make and remakes
- Fitting will hold to the burst of the tubing
- Makeup is industry standard 1¼ turns from finger tight
- Remake is ¼ turn from finger tight which brings you back to original position, then snug slightly to respring the ferrule(s) into a sealing position.

NOTE

1. AGCO tube option meets the requirements of NACE.

Available with Single or Dual Ferrule Design:

Single ferrule design

Option is '-() AT'

Dual ferrule design

Option is '-() ATD'

Bonnet Lock (BL)^[1]

The Anderson Greenwood bonnet lock prevents accidental loosening of the bonnet-to-body seal. A high-strength, short bonnet pin aligns a hex collar over the bonnet. A standard panel nut locks the collar against the valve. Tests indicate the minimum torque required to break the collar loose is greater than the torque required to twist off the handle. Available with Graphite packed bonnets only.

NOTE

1. Patent protected.
